

UP YOUR GAME.

Our fully patented **Heads Up™** system improves situational and spatial awareness by providing immediate feedback to basketball players, ultimately:

Improving game performance and reducing injury potential.

WE'VE RAISED THE BAR

In competitive football, the difference between winning and losing often lies in the details. This is especially true as rules evolve and inform one's approach to training. Reaction Tech is committed to moving the needle for football teams by providing beneficial training tools that improve form, build successful playing techniques, and promote the highest standard of safety so you never "drop the ball."

Heads Up™ is designed for all levels of gameplay, if you're training an elite college football team, preparing an AAU squad, or developing players at the middle and high school levels.

OUR TECHNOLOGY

- ✓ Builds muscle memory
- ✓ Reinforces proper technique
- ✓ Enhances common training tools
- ✓ Allows coaches to provide immediate feedback

A PRODUCT IN A LEAGUE OF ITS OWN: HEADS UP™

We've designed a product that **increases efficiency** and **reduces human error**. **Heads Up™** is a small screen device that can be mounted on physical equipment.

TACKLING DUMMY ACCESSORY

- Perfect for football and rugby
- Designed to minimize head, neck, and spine injuries by ensuring proper tackling procedures
- Aligned with new NFL rules that emphasize stance, posture, and technique (knees bent, pads down, hands first, head up and out of the way) to reduce foul player contact

HOW IT WORKS

- 1 As an athlete approaches the device, a coach remotely directs the **Heads Up™** device to display a number, letter, or symbol on the screen.
- 2 While performing a drill (tackling and moving), the athlete tells the coach what was displayed. This is only possible if the athlete approached the device using a proper heads-up pose.

THERE'S SOMEONE IN YOUR CORNER

We want athletes to succeed at the highest level without sacrificing safety. We've integrated years of playing and coaching experience to develop a product that trains players to win.
